Chapter:1

Introduction

- What is web development?
- Lifecycle of web development.
- Web technologies.
- Types of websites.

❖ What is web development?

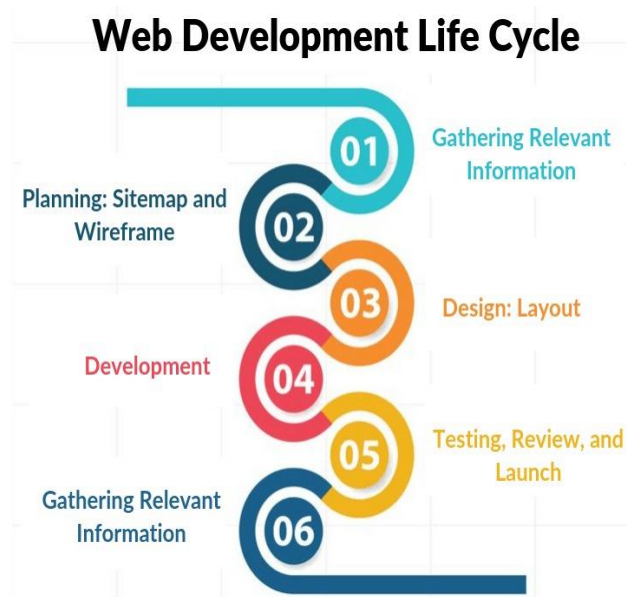

Web development refers to the building, creating, and maintaining of websites. It includes aspects such as web design, web publishing, web programming, and database management. It is the creation of an application that works over the internet. i.e. websites.

Web Development can be classified into two ways:

Frontend Development: The part of a website that the user interacts directly is termed as front end. It is also referred to as the ‘client side’ of the application.

Backend Development: Backend is the server side of a website. It is the part of the website that users cannot see and interact. It is the portion of software that does not come in direct contact with the users. It is used to store and arrange data.

❖ Lifecycle of web development.

Stage 1: Gathering Relevant Information

The first stage is the most important as it involves understanding the client's requirements. Identify their needs and help them in providing the perfect solution. Have a clear idea about the target audience. What the business goals are and how the website will be utilized to accomplish those objectives.

Stage 2: Planning – Sitemap and Wireframe

With all the information that has been gathered from stage one, the design and implementation strategies are planned according to the type of website and target audience. A site map is created in this phase.

Stage 3: Design & Layout

Next is to determine the look and feel of the website. In the design phase, it is essential to embed elements like the logo of the company and the colors that help to enhance to identification of the company on the website

Stage 4: Development

The development is a stage where the website is built while maintaining the essence of the website's purpose. All the graphic elements are taken into consideration and are used to generate a functional website.

Stage 5: Testing, Review, and Launch

After the completion of web development, it is tested. The functionality is tested along with the device compatibility. The quality assurance team tests for functionality, compatibility, and performance to ensure that the website is ready for the launch.

Stage 6: Maintenance and Updation

The web development stages don't end after deployment. There are many post-deployment tasks that take place. Some elements are changed as per the user's feedback, support, and maintenance.

❖ **Web technologies.**

Web Technology refers to the various tools and techniques that are utilized in the process of communication between different types of devices over the internet. A web browser is used to access web pages. Web browsers can be defined as programs that display text, data, pictures, animation, and video on the Internet.

Web Technology can be classified into the following sections:

World Wide Web (WWW): The World Wide Web is based on several different technologies . Web browsers, Hypertext Markup Language (HTML) and Hypertext Transfer Protocol (HTTP).

Web Browser: The web browser is an application software to explore www (World Wide Web). It provides an interface between the server and the client and requests to the server for web documents and services.

Web Server: Web server is a program which processes the network requests of the users and serves them with files that create web pages. This exchange takes place using Hypertext Transfer Protocol (HTTP).

Web Pages: A webpage is a digital document that is linked to the World Wide Web and viewable by anyone connected to the internet has a web browser.

❖ **Types of websites.**

They are Three types of websites **Static, Dynamic or CMS and E-Commerce.**

Static :-

When you simply need a couple of pages on your site and don't need the data to change, a static design is the best. Static websites are made in HTML, CSS and Java. They are simple to create and are easily crawled by search engines

CMS(Content management system) or Dynamic :-

A dynamic website design can convey dynamic data. This implies relying upon changes occurring; the site data are updated automatically depending on a couple of criteria. Its design is created on content management platform or CMS like WordPress, Joomla and so on. The main hindrance is that this sort of website is hard to design.

E-Commerce :-

In the event that you have a store which involves sales, then you need an eCommerce website or e-store. A decent eCommerce platform encourages you to deal with all the technical parts of the website. There are a large number of platforms where you can design an eCommerce site like flipcart , amazon , Myntra , Snapdeal and so on

The screenshot shows a web browser window with two tabs labeled 'Home page'. The address bar displays '127.0.0.1:5500/contact.html'. The page title is 'CONTACT ME'. The form is set against a dark blue background and includes the following fields:

- First Name:** A text input field with the placeholder 'Your name..'.
- Last Name:** A text input field with the placeholder 'Your last name..'.
- Country:** A dropdown menu currently showing 'India'.
- Subject:** A large text area with the placeholder 'Write something..'.
- Submit:** A button located at the bottom left of the form.

Task 12: add the address and map and create a footer in contact page .

Conclusion

On the whole, this internship was a useful experience. I have gained new knowledge, skills and met many new people. I achieved several of my learning goals, however for some the conditions did not permit. I got insight into professional practice. I learned the different facets of working within a company. I experienced that financing, as in many organisations, is an important factor for the progress of projects. Related to my study I learned more about how to make website using html and css js. There is still a lot to discover and to improve. The methods used at the moment are still not standardized and a consistent method is in development.

The internship was also good to find out what my strengths and weaknesses are. This helped me to define what skills and knowledge I have to improve in the coming time. It would be better that the knowledge level of the language is sufficient to contribute fully to projects. when my degree is completed I think that I could start my working career. However I could perform certain tasks in research better if I practice/know more then I learn new thing in my subject. It would also be better if I can present and express myself more confidently.
